AI Career Coach

1. Overall Evaluation

Shubham Kardel's resume demonstrates a solid foundation in data analysis and business analytics, with relevant projects and certifications. The candidate has experience with Power BI, Python, and various data manipulation and visualization libraries. However, the resume lacks recent work experience and advanced technical skills in areas such as artificial intelligence, machine learning, and specific tools like Docker and FastAPI. The overall ATS score of 85/100 indicates that the resume is well-structured and contains relevant information, but there is room for improvement to better align with the technical requirements of many modern tech roles.

2. Five ATS Improvement Suggestions

1. **Add Recent Work Experience**: Include any recent internships or projects that align with the technical skills required for the positions you are applying for. This will help the ATS identify your most relevant experience.
2. **Highlight Advanced Technical Skills**: Emphasize your proficiency in AI, machine learning, and specific tools like Docker, FastAPI, and PyTorch. This will make your resume more competitive for tech roles.
3. **Update Your Education Section**: Since your BCA is not yet completed, consider adding a projected graduation date to give a clearer timeline.
4. **Expand Your Projects**: Provide more detailed descriptions of your projects, especially those that showcase your use of AI and machine learning techniques. Include metrics or outcomes where possible.
5. **Include Soft Skills**: Highlight soft skills such as problem-solving, teamwork, and communication, as these are often valued in tech roles.

3. Missing Technical Skills

The resume is missing several critical technical skills that are in high demand in the tech industry, including:

- **Artificial Intelligence (AI)**
- **Computer Vision**
- **Deep Learning**
- **Docker**
- **FastAPI**
- **Generative AI**
- **Git**
- **Gradio**
- **Langchain**
- **LLM (Large Language Models)**
- **OpenCV**
- **Prompt Engineering**
- **PyTorch**
- **RAG (Retrieval-Augmented Generation)**
- **Streamlit**
- **TensorFlow**
- **Transformers**
- **YOLO (You Only Look Once)**

4. Resume Formatting Advice

1. **Consistent Formatting**: Ensure that the formatting is consistent throughout the resume. Use a clear, readable font and maintain a uniform style for headings, subheadings, and bullet points.

2. **Professional Summary**: Add a professional summary at the top of the resume that briefly outlines your career goals and key skills. This can help the ATS and hiring managers quickly understand your value proposition.
3. **Bullet Points**: Use bullet points to list your skills and experiences. This makes the resume easier to read and scan.
4. **Contact Information**: Ensure that your contact information is up-to-date and professional. Consider including a LinkedIn profile URL if it is well-maintained.
5. **Keywords**: Include relevant keywords from the job descriptions you are applying for. This will help the ATS identify your qualifications more effectively.

5. Final Career Recommendation

To enhance your resume and increase your chances of success in tech roles, focus on acquiring and showcasing the missing technical skills. Consider taking online courses or participating in projects that involve AI, machine learning, and other relevant technologies. Additionally, update your resume to reflect your recent education and experiences, and ensure it is well-formatted and keyword-rich. Networking and attending tech meetups or webinars can also help you stay current with industry trends and connect with potential employers.

### **Education**

Bachelor of Computer Applications (B.C.A.)  
2023 – 2026  
Dr. G. Y. Pathrikar College of CS & IT  
CGPA: 8.0/10.0

---

### **Experience**

#### **Business Analyst Intern**

S4S Technologies Pvt. Ltd.

Dec 2025 – Feb 2026

- Managed MIS reporting, maintained business records, and prepared accurate daily, weekly, and monthly reports using Microsoft Excel and Microsoft Office tools.
- Developed interactive dashboards in Power BI and Advanced Excel to monitor key performance indicators (KPIs), performance trends, and operational insights for management.

- Performed data entry, data cleaning, data validation, and report consolidation to ensure high data accuracy in a product-based company environment.
- Created professional presentations (PowerPoint), business summaries, and analytical reports to support decision-making and cross-functional teams.

---

### **\*\*Projects\*\***

#### **\*\*Supply Chain & Production Analytics Dashboard\*\***

Tech Stack: Power BI, Microsoft Excel, Power Query, DAX

- Developed an interactive Power BI dashboard to monitor production, raw material utilization, wastage, and operational efficiency.
- Designed KPI dashboards with dynamic filters for date, cluster, DCM, and FC to support detailed business analysis.
- Automated MIS reporting by transforming Excel data into interactive visualizations, improving reporting accuracy and decision-making.

#### **\*\*Walmart Sales Analysis & Prediction\*\***

Tech Stack: Python, Pandas, Scikit-learn, Matplotlib, Seaborn, XGBoost

- Performed exploratory data analysis (EDA) to identify sales trends, seasonal patterns, and factors affecting Walmart store performance.
- Preprocessed data using feature engineering, label encoding, outlier treatment, and scaling to prepare it for machine learning models.
- Built and evaluated multiple regression models, with XGBoost achieving the best performance for weekly sales prediction.
